

A close-up photograph of a single, clear water droplet resting on a vibrant green leaf. The leaf's intricate vein structure is clearly visible, and the droplet's surface reflects the surrounding greenery. The background is a soft-focus green, creating a natural and clean aesthetic.

GHD Environmental Management Systems & Audits

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Our clients face increasing pressure to demonstrate sound environmental management practices. GHD's environmental teams have extensive experience in developing and implementing practical, user friendly environmental management systems (EMS) for public and private organisations.

GHD can work with you across all stages of environmental management system (EMS) development, including initial environmental review/gap analysis, development of registers of aspects and impacts and legal requirements, assisting clients to develop procedures, implementation of the system, and training of staff.

Environmental audits can identify opportunities to avoid or minimise environmental impacts, minimise risk of environmental fines, and reduce energy, water and other resource use. We have a strong history working closely with clients in mining, oil and gas, waste, defence and agriculture.

Services

- Environmental Management Systems
- Environmental training
- Triple-bottom-line reporting
- Ecologically sustainable development
