

GHD Electrical Engineering - Building

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

The evidence is overwhelming – around 40 percent of the world’s energy is consumed by buildings, and most of that is delivered electrically.

Carefully integrated design, highly efficient lighting, effective power distribution systems and the maximum use of natural, renewable sources of light and energy will significantly reduce the impact of the built environment on the world. GHD’s experienced team provides integrated electrical engineering services as part of a total building services package.

Our clients include:

- Government institutions and education
- Museums, galleries, libraries, performance venue
- Healthcare and aged care
- Commercial, retail and hospitality
- Correctional facilities and emergency services
- Energy, industry, water
- Air, road, rail or sea transportation

Services

- Facility management
- Sustainable design
- Electrical building infrastructure
- Building distribution
- Lighting
- Communications
- Audio-visual
- Security
- Controls
- Vertical transportation
- Medical and fire systems
- Project management

We’ll customise our offering to meet your specific needs.
