

GHD Materials Technology

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

GHD's Materials Technology team provides cost-effective, independent professional advice to a diverse client base. We deliver:

- Design and specification of materials appropriate for their intended service life, environment and loads
- Engineering management to achieve the design life of structures/plant and their construction materials
- Engineering of remedial measures for deteriorated structures appropriate to their operating requirements and intended future service life

Access to materials testing and research enables our professionals to develop cost-effective and timely solutions for materials-related issues.

We are committed to assisting clients in achieving lowest life cycle cost asset life, minimising operations downtime and promoting long-term efficiency for ongoing processes.

Services

Our network of materials technology consultants provides solutions for clients in:

- Diagnosis investigation
- Remedial engineering
- Durability assurance
- Corrosion engineering
- Construction materials technology
- Materials testing and research

We advise owners, designers and contractors to achieve durable structures.

Partner with us and benefit from a unique combination of state-of-the-art knowledge and practical engineering skills.
