

GHD Wastewater Collection

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Up to 70 percent of the total value of wastewater infrastructure can be invested in the collection systems.

GHD has the knowledge base and systems to tackle any wastewater transportation problem - for new systems or the upgrading of existing assets.

Having designed more than 1000 sewage pump stations and over 6000km of sewers, our industry professionals challenge conventional approaches to establish new cost-effective benchmarks.

Services

- Integrated urban water management
- Strategic planning
- Network modelling
- Gravity and vacuum sewerage schemes
- Pump stations
- Special structures
- Overflow reduction
- Infiltration and inflow
- Sulphide control, minimisation and rehabilitation
- Project management
- EPCM services
