

GHD Geology

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

“When all is said and done, everything comes down to the geology of your site - you can’t afford to ignore it”

- Greg Kotze

Our team applies geological principles to the civil engineering, mining and resources development industries. We work alongside our clients to deliver tailored solutions, to optimise the negotiation of your prevailing geological conditions, thereby minimising both cost and project risk

Our geological services are fully integrated with the diverse skills base of GHD, as an international professional services provider.

Geology menu

- Engineering and mining applications
- Natural and excavated rock slopes
- Rock slope stability and stabilisation
- Excavation design and support
- Tunnels, shafts, cuttings, foundations, dam sites
- Rockfalls, landslides, cliff collapses
- Surface and sub-surface investigations
- Hazard mapping, risk assessments, risk mitigation
- Specialist rock testing laboratory
- Comprehensive in-house geophysics
