GHD Readiness of department

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Who did this country's largest fire department turn to when it needed help? When it comes to improving readiness and firefighter safety through business process improvements like tracking assets and maintenance activities, the answer is GHD. We are working with FDNY to implement an Enterprise Asset Management System (EAMS).

Whether your department has 200 fire houses or 10 fire houses, 30 emergency medical stations or 3 emergency medical stations, an Enterprise Asset Management System (EAMS) can improve your department readiness and save costs.

EAMS benefits

- Streamline how you run the department through business process analysis and improvements

- Standardize the way you track assets and maintenance activities

- Access a snapshot of department readiness through easy-to-access dashboards of information

- Reduce the potential of equipment failures by identifying equipment that is nearing the life cycle end date or planned replacement date

- Improve firefighter safety with proactive critical equipment inspections and preventive maintenance schedules

To find out more about how an EAMS can support you and your department, from the people who know how fire departments work, contact:
