

GHD Bridges

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Clients benefit from a full range of engineering skills covering the entire bridge lifecycle— planning, design, construction, rehabilitation and replacement.

From simple, single span structures through to major landmark bridges including the South Road Superway in Adelaide, and the Green Bridge in Brisbane, our team's experience presents clients with a variety of cost-effective bridging solutions.

With more than 60 years' experience on small to large projects, our team offers services that include studies and investigations, tender and final designs, proof checking, construction engineering, contract administration, bridge inspection and remedial engineering.

Our knowledge extends beyond local solutions; we harness a global network of professionals to deliver the most innovative, cost effective outcomes for your projects.

Services

- Studies and investigations
- Tender and final designs
- Proof checking
- Construction engineering
- Contract administration
- Bridge inspection
- Remedial engineering
- Transport planning
- Traffic and road design
- Waterway analysis
- Geotechnical and environmental investigations
- Surveys
- Project management
- Funding applications
