

GHD Contamination Assessment & Remediation

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Contamination of land or water can pose heavy community, environmental, legal, and financial burdens on a property owner or occupier.

GHD, through technical knowledge and experience can demonstrate cost savings using innovative and sustainable assessment, management and remedial solutions to contamination problems. We have a proven record in dealing with some of the most difficult contaminated sites caused by a wide range of industries. We have proven our competitive edge in providing practical, cost effective and sustainable solutions in dealing with recalcitrant contaminants in soils and groundwater, such as scheduled wastes (pesticides and PCBs), dioxins, gasworks contaminants, and contamination involving hydrocarbons and metals.

We work through our extensive networks to communicate with our clients, researchers and policy makers to develop and implement tailored solutions with triple bottom line benefits. Our experience over many years means we understand the industry in which our clients operate and the local landscape in which they work.

Services
