

GHD Instrumentation & Control

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Many businesses place increasing demands on real time data accessibility in order to improve business planning and decision making. This data can demonstrate economic and environmental performance.

Advancement in technology provides a unique challenge as our clients seek assurance that their control system investments will deliver efficient operational performance and economic returns.

GHD's instrumentation and control team delivers automation and process control solutions for our clients in a fast-changing global environment. We work with clients in the manufacturing and industry sectors, including mining and mineral processing, knowledge and information, materials handling, power generation, oil and gas, water and wastewater, chemicals, transportation and food and beverage solutions.

Services

- Studies - feasibility studies, investigations, audits (for control system replacement, migration, upgrade and optimisation)
- Engineering design - conceptual design, detailed design and specification
- Procurement - purchasing, tendering and administration
- Construction - project management services, safety, commissioning, training, operation and maintenance manuals, and handover
- Management - planning, control, coordination, monitoring and reporting, asset management and documentation
