

GHD Tailings

WATER | ENERGY & RESOURCES | ENVIRONMENT | PROPERTY & BUILDINGS | TRANSPORTATION

Our tailings and mine waste professionals combine practical experience, industry skill and innovative technology to develop safe, economical and appropriate outcomes. Be it base metal, gold, alumina, ash dams, mineral sands or other mine waste and tailings, GHD has the resources to solve your issues.

Over the past 30 years, we've earned local and international recognition for cost-effective, practical, and innovative methods used in tailings design and management.

GHD is represented on national and international technical committees including Australasian Institute of Mining and Metallurgy (AusIMM), Australian National Committee on Large Dams (ANCOLD) and close links with organisations such as the Australian Centre for Geomechanics (ACG).

Services

- Planning and approvals
- Investigation and design
- Project management
- Operation and maintenance
- Environment
- EPCM services
- Closure and rehabilitation

Successful tailings and mine waste management must incorporate an array of disciplines to produce safe and reliable solutions. We provide these skills in-house, customising your project team to provide a focused service to enable success.
